[Hiring Manager Name or "Hiring Team"] [Company] [Address]

Re: [Role Title] ([Job ID])

Dear [Hiring Manager Name],

I'm a platform and security engineer with 12+ years building secure, code-driven infrastructure across Kubernetes, AWS, Azure, GCP, and bare metal. I'm applying for the [Role Title] role because [one sentence on what draws you to this team or problem].

Platforms as software. I ship Kubernetes platforms as versioned releases through Git-driven automation. At ZagTech I created à la carte-as-code, a radically simple Terraform design for ordering complex clusters from a menu (Kate's Kitchen), and automated Flux across multi-project, multi-environment cluster fleets. At Invitae I did the same for a petabyte-scale genomics platform.

Automation that removes toil. At The Motley Fool I wrote Python tooling that migrated about 200 repositories from Jenkins to GitHub Actions, saving months of manual effort.

Identity and security. At Stanford I helped move the university's authentication stack (SAML/Shibboleth, Kerberos, OpenLDAP) onto Kubernetes and ran multi-tenant Vault PKI. I also architected a zero-trust Active Directory whose domain controllers stay invisible until clients establish IPsec with ephemeral Vault certificates. Today I co-run a consultancy building Terraform-based Zero Trust capability packages modeled on NIST SP 800-207.

I document what I build so others can own it. I'd welcome the chance to discuss how I can help [Company] [goal from the posting, e.g., "scale its platform"].

Sincerely,

Ian Douglas
