Greetings,

I'm a seasoned Platform Engineer and Infrastructure Architect interested in leveraging my skills building automated high-concurrency architecture and my 12+ years of experience in backend engineering and platform delivery to serve your mission. I bring deep experience:

* Kubernetes & Orchestration: I've operated self-hosted Kubernetes at Stanford, Pearson, and Invitae, and written infrastructure code in support of continuous delivery, automated gitops-style operations, and platform as a product.

* Backend Tooling (Go & Python): I build Go and Python tools to streamline GitOps workflows and improve developer velocity. I deeply enjoy writing code and have been immersed in Python since 2012.

* High-Concurrency Performance: While supporting the Marvel Heroes MMORPG, I wrote cluster operations and data pipeline tools for a platform with 40k+ Daily Active Users and weekly releases.

For detailed examples of these skills and experiences, please see my portfolio of work on github.com/iancaseydouglas/resume

I'd welcome the chance to discuss how my background might be useful to your mission and how I can contribute to the team.

Sincerely,
Ian Douglas
